

Mid-Mountain Materials

THE FINAL BARRIER AGAINST ABRASION, CHEMICALS AND HEAT

THERMOPAK® FLUE END SEALS

Mid-Mountain Materials, Inc. manufactures a comprehensive range of sealing and insulating components used in both open top and closed top style carbon baking furnaces. THERMOPAK® Flue End Seals are designed to achieve excellent sealing, and provide maximum service life in the application. Some of the features and benefits of THERMOPAK® Flue End Seals are mentioned alongside the photo below.

- **Manufactured from silicone impregnated fiberglass cloth of various weights to specific customer requirements. Provides great seal with long life.**
- **Center rigidizer board of resin laminate provides body for seal, takes the heat and keeps seal flat without staying bent like metal center inserts, which can cause the seal to be ineffective.**
- **Angle aluminum used for installation and extraction points keeps Flue End Seals light and easier to hold in place under operation.**
- **Sewn using Kevlar thread for strength and reinforced with stainless steel staples.**

THERMOPAK® Flue End Seals are part of a family of sealing and insulating products manufactured by Mid-Mountain Materials, Inc. to optimize your furnace's operation through effective draft control and improved insulation. Other products for carbon bake furnaces include, exhaust port covers, exhaust manifold flexible leg boots, cooling manifold boots, leg seal gaskets, burner gaskets, draft probe gaskets, side main donut gaskets, side main snake gaskets, side main top seal cloths, side main flex leg connectors, flue end seals, pit corner tight packing seals, pit cover blankets and tarps, ECL crane boots, temporary seals, moldable materials and rolled plastic.
